Iron and H₂S problems?

Your Water, The Universal Solvent!

Water is considered the universal solvent. As it passes from liquid to vapor and back again, it tends to dissolve everything it touches -whether in the air as water vapor where it can mix with H₂S from smoke stacks forming acid or from the ground, absorbing calcium, magnesium, H₂S, iron, lead and limestone - water can have a negative impact on you, your household and your pocketbook. Depending on where you live, contaminants from sewage, industrial waste and agricultural run-off can also seep into your water supply.

Your Water May Have Iron and H₂S.

If your water has the odor of "rotten eggs", if there are iron stains on your sinks and bathtubs...if you use large amounts of soap to clean dishes, wash your hair or suffer the "orange hair" effect sometimes caused by iron water, you probably have water that can be successfully treated with an Ironbreaker III iron and H₂S removal system. If left untreated, the minerals will cause yellow/brown stains on fixtures and clothing, clogged pipes and appliances, shortened service lives for dishwashers, washing machines and water heaters, all adding to the cost of maintaining appliances while increasing the amount of energy consumed in your home.

Water softeners eliminate the effects of hard water; the Ironbreaker III eliminates iron and will remove H₂S's objectionable effects.

Whether it's rust stains in your sinks and laundry, or the "rotten egg" smell of H₂S when you turn on a tap, your water problems can cause you and your family more than embarrassment and frustration. Iron and H₂S can damage your fixtures and plumbing, discolor your laundry or create unpleasant odors in drinking water and showers.

Soft water that is iron and odor free makes a big difference you can see, and feel, all over the home.

In the Bathroom: No more iron stains or rotten egg odor. Soap and shampoo will lather better. Hair and skin will feel noticeably cleaner. And when used with a water softener, your iron free, odor free water will be soap scum free, without mineral deposits to clean off sinks, showers, tubs and toilets.

In the Laundry: Without iron or H₂S in the water, clothes will be whiter and brighter. Plus, they will last longer. Add a water softener and increase the life of clothing, towels and linens by up to 33% and add even longer service life to your appliances.

In the Kitchen: No iron stains on the sink, no objectionable odor while running water for cooking, cleaning or drinking. Dishes will clean more easily and, by adding a water softening unit, your dishes will be spot free without the film glasses get when etched by mineral-laden water.

Throughout the House: Water using appliances will last longer and run better. Why? Because hot water heaters, washing machines and dishwashers using iron laden, hard water can wear out 30% faster, while consuming more energy than an appliance using iron free, H₂S free, soft water.

Water Treatment Products

Until recently, the most common solution for problem iron and H₂S water involved the use of harsh chemicals and complicated equipment, requiring regular care and service by the homeowner or water treatment professional.

The Ironbreaker III, by Charger, now offers the “natural” solution for removing iron and H₂S. A proven, patented technology that uses nature's own oxidation process to eliminate iron and H₂S without chemicals, without air compressors, without aerators and without external venturis. Using nature's own oxidation process, leaving you with fresh, clean, odor free water throughout your home.

All of your water using appliances will lead longer lives. Dishwashers, automatic washers and, of course, your water heater will benefit from having reduced iron and H₂S, adding years to the life of major appliances and postponing expensive repair and replacement.

How the Ironbreaker III works:

The Ironbreaker III stores a “bubble” of air, compressed by your well pressure, within the media tank. As your water passes thru the air, the iron or H₂S is converted to a particle which is then trapped by the catalytic filter media in the tank while the air “bubble” is gradually consumed by the passing water. For regeneration, the unit first “backwashes” itself, removing any iron particles it has trapped. The system then replenishes the “air bubble” by drawing in atmosphere, temporarily emptying the tank of all water and transferring oxygen molecules into and on the surface of the media bed where all oxidation occurs. The system then returns to the “service” position, again filtering your water.

Optional Ozone Sanitizer

By adding the ozone generator option, the Iron Breaker III system is automatically sanitized during the regeneration process. Ask your dealer for details.

Water....Your Way!

The Ironbreaker III controls the Iron and H₂S in your home:

- Stop iron stains from occurring
- Enjoy clean, odor free water
- Protect your water softener from iron fouling
- Protect plumbing fixtures, appliances and clothing
- Protect pipes from iron clogging and black oxidation caused by H₂S
- Eliminate the need for chemical feed treatment systems
- Solutions for water with high iron and high H₂S content
- Single system household flow rate to 21 GPM

Reverse Osmosis Drinking Water System

- *Delicious, sparkling-clear drinking water*
- *Convenience: Fresh, clean water at your faucet*
- *Pristine, flavorful coffee, tea and juice*
- *Quality water for your aquarium*
- *Cleanly rinsed fresh fruits and vegetables*
- *Crystalline, harder and clearer ice cubes*
- *Prolong the life of your humidifier or steam iron*
- *Spotless glassware when rinsed with R.O. water*
- *Cost effective: No more bottled water costs*
- *Better tasting soups, sauces and meals*
- *Environmentally sound: No chemicals*
- *Great for family pets*

The "R.O." of the system is the secret.

"R.O." is Reverse Osmosis. This is the natural process which sets the foundation of R.O. systems. It may sound technical, but osmosis is a natural, organic phenomenon, a process that occurs in nature on a continuous basis. Vegetation, like trees, plants and flowers attain their nutrients by using osmosis to draw water from the soil.

Reverse Osmosis (R.O.) works like this:

The pressure from a household tap forces water through a semipermeable membrane. This membrane separates the water at the molecular level. The membrane acts like a filter, assuring the Reverse Osmosis water has substantially reduced impurities and dissolved solids. This cleaner, more refined water is then stored in a holding tank, ready at your convenience.
